

ABSTRACT OF THE DISCLOSURE

A moisturizing hairdressing apparatus, which has a main unit for generating steam to moisturize one's hair and a handpiece movably attached to the main unit. In this moisturizing hairdressing apparatus, the handpiece is provided with a steam injecting unit and a negative ion injecting unit. The steam injecting unit injects the steam supplied by the main unit, and the negative ion injecting unit injects negative ions. In this apparatus, injection of either steam or negative ions or simultaneous injection of both can be selected, and injection and suspension of injection can be locally controlled by a trigger switch or a selecting switch.
